THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS** FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kip Werking on 01/22/2009.

The application has been amended as follows:

Replace claim 1 with the following:

A fuel cell system comprising:

a fuel cell having output terminals;

a voltage converter that is connected to said output terminals of said fuel cell;

an electrical storage device that is connected in parallel to said fuel cell via said voltage converter and is capable of power charging and discharging;

a current detector that detects a current value of said fuel cell; and

[[an]] a current offset correction value determination device that determines [[an]] a current offset correction value for said current detector by setting an output terminal voltage of said fuel cell to an open circuit voltage via said voltage converter, wherein said fuel cell system is mounted in a moving object, said current offset correction value determination device determines said current offset correction value by setting the output terminal voltage of said fuel cell to the open circuit voltage during a period that the moving object does not require power generation by said fuel cell.

Replace claim 4 with the following:

A fuel cell system according to Claim 1, wherein said fuel cell system is mounted in a moving object, and said current offset correction value determination device determines said current offset correction value by setting the output terminal voltage of said fuel cell to the open circuit voltage when a temperature of said current detector equals or exceeds a prescribed temperature, when a rate of temperature increase of said current detector equals or exceeds a prescribed rate, or after a prescribed period of time has elapsed since a correction of said current detector.

Replace claim 5 with the following:

A fuel cell system according to Claim 4, wherein when an amount of power demanded by said moving object exceeds an amount of power that can be supplied by said electrical storage device, said current offset correction value determination device does not set the output terminal voltage of said fuel cell to the open circuit voltage and does not determine the current offset correction value.

Replace claim 6 with the following:

A fuel cell system comprising:

a fuel cell having output terminals;

a current detector that detects a current value of said fuel cell; and

[[an]] a current offset correction value determination device that determines [[an]] a current offset correction value for said current detector by setting an output terminal voltage of said fuel cell to an open circuit voltage, wherein

said fuel cell system is mounted in a moving object, said current offset correction value determination device determines said current offset correction value by setting the output terminal voltage of said fuel cell to the open circuit voltage during a period that the moving object does not require power generation by said fuel cell.

Replace claim 7 with the following:

A method of determining [[an]] a current offset correction value for a current detector in a fuel cell system including an electrical storage device that is connected in parallel to a fuel cell via a voltage converter, wherein the voltage converter is connected to output terminals of such fuel cell, the method comprising:

setting an output terminal voltage of said fuel cell to an open circuit voltage via said voltage converter; and

determining the current offset correction value for said current detector, wherein the fuel cell system is mounted in a moving object and the current offset correction value is determined by setting the output terminal voltage of said fuel cell to the open circuit voltage during a period that the moving object does not require power generation by said fuel cell.

Allowable Subject Matter

2. Claims 1-7 are allowed.
3. The following is an examiner's statement of reasons for allowance:

As per claim 1 primarily, the prior art of record, taken alone or in combination thereof, does not disclose or suggest in the claimed combination:

said current offset correction value determination device determines said current offset correction value by setting the output terminal voltage of said fuel cell to the open circuit voltage during a period that the moving object does not require power generation by said fuel cell.

As per claim 6, the prior art of record, taken alone or in combination thereof, does not disclose or suggest in the claimed combination:

said current offset correction value determination device determines said current offset correction value by setting the output terminal voltage of said fuel cell to the open circuit voltage during a period that the moving object does not require power generation by said fuel cell.

As per claim 7, the prior art of record, taken alone or in combination thereof, does not disclose or suggest in the claimed combination:

the current offset correction value is determined by setting the output terminal voltage of said fuel cell to the open circuit voltage during a period that the moving object does not require power generation by said fuel cell.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
